COVID-19 VACCINATION DISTRIBUTION

Ohio and Putnam County continue to provide COVID-19 Vaccine to those in a phased approach. We are still in Phase 1B, which includes individuals over the age of 65 and those with severe medical disorders (determined by CDC). While we realize that there are many other conditions that may put a person at high risk of severe illness if they should develop COVID-19, at this time, the persons included in the "severe medical disorders" category include the following:

> Severe congenital, developmental, or early-onset medical disorders that make them particularly vulnerable, such as:
>
> - cerebral palsy
> - spina bifida
> - congenital heart disease
> - type 1 diabetes
> - inherited metabolic disorders
> - severe neurologic disorders including epilepsy
> - severe genetic disorders including Down Syndrome, Fragile X, Prader Willi Syndrome, Turner Syndrome
> - severe lung disease including cystic fibrosis and severe asthma
> - sickle cell anemia
> - alpha- and beta-thalassemia

NOTE: Due to limited supply of vaccine, moving to other groups for the vaccine may be delayed. Please know that we are providing the vaccine as quickly as possible after it is received and we will schedule others in group 1B when we are able. Thank you for your understanding.
